Scope

This policy applies to the University's Covered Components and those working on behalf of the covered components, designated as such for purposes of complying with the privacy provisions of the Health Insurance Portability and Accountability Act of 1996. The Covered Components are: (1) the Group Health Plan Component; and (2) the Covered Health Care Component, which includes the School of Nursing, the Department of Psychology clinics, Yale Health and the School of Medicine (except the School of Public Health and the Departments of Cell Biology, Cellular and Molecular Physiology, Comparative Medicine, History of Medicine, Immunobiology, Microbial Pathogenesis, Molecular Biophysics & Biochemistry, Neurobiology, Pharmacology, and WM Keck Biotechnology Resources Laboratory).

This policy was developed to protect against unauthorized physical access to protected health information (PHI) in all formats (electronic or ePHI, paper video, audio etc.). This policy covers PHI on campus and on non-Yale property.

Policy Statement

Unauthorized physical access to protected health information (PHI) is prohibited.

Reason for the Policy

This policy was designed to comply with the federally mandated privacy and security rules of the Health Insurance Portability and Accountability Act (HIPAA) - Public Law 104-191.

Definitions

Protected Health Information (PHI) - Protected Health Information means any information that identifies an individual AND relates to:

- The individual's past, present or future physical or mental health; OR
- The provision of health care to the individual; OR
- The past, present or future payment for health care.

Information is deemed to identify an individual if it includes either the patient's name or any other information that taken together or used with other information could enable someone to determine an individual's identity. (For
example: date of birth, gender, medical records number, health plan beneficiary numbers, address, zip code, phone number, email address, fax number, IP address, license numbers, full face photographic images, NetID or Social Security Number)

Data Center - A data center is a centralized repository for the storage, management, and dissemination of data and information organized around a particular area or body of knowledge (e.g., University financial and HR data, or patient scheduling, billing and medical records). At Yale University this refers to centrally controlled data centers owned and operated by ITS.

Policy Sections

This Policy is designed to set physical parameters to ensure the integrity of PHI and restrict access to unauthorized individuals.

Physical Access and Environmental Supports of ITS Data Centers
The University is responsible for maintaining a Physical Facility Security Plan for University ITS Data Centers. The University Physical Facility Security Plan ensures that PHI (Protected Health Information) in any format (electronic, paper, audio tapes, transcripts, videotapes, etc.) that is housed in University and ITS data center locations meets HIPAA requirements for physical security. Copies of the University’s Physical Facility Security Plan are maintained by Yale University Office of Facilities and ITS.

Physical Access and Environmental Supports on Yale Property Outside the Data Centers
It is the responsibility of departmental business managers to implement safeguards such that protected health information within their department is protected from physical access by unauthorized individuals and environmental safeguards are in place to protect the confidentiality, access and integrity of PHI as commensurate with data criticality and risk assessment. The Department of University Security Programs can assist individual departments in selecting appropriate options. Safeguards must be implemented throughout the life cycle of devices containing PHI, including through decommissioning (see also Policy 1609, Media Controls and associated procedures.)

Physical Access and Environmental Supports on Non-Yale Property
It is the responsibility of departmental business managers to certify that protected health information located at non-Yale business locations (e.g., YNHH, WHVA) is adequately protected from physical access by unauthorized individuals and that environmental safeguards are in place to protect the confidentiality, access and integrity of PHI as commensurate with data criticality and risk assessment. The Department of University Security Programs can provide consultations and work as a liaison with the other location for physical security issues.

Physical Security of Portable Electronic Devices
Portable electronic devices used to store, access, transmit or receive Electronic Protected Health Information (ePHI) will be subject to special requirements designed to minimize the risk of inappropriate disclosure of ePHI through theft or accidental loss.

Safeguards for Computing Display Screens
Procedures must be in place to ensure that the inappropriate access or viewing of the display screen of any computing device that creates, receives or distributes ePHI (Protected health Information) is minimized. Compliance is paramount in patient or research-subject areas.
Physical Security of Paper Records

You must secure paper records that include protected health information: Policy guidelines for physical security.

You must immediately report all incidents that may involve the loss or theft of any such paper records.

Call: (203) 432-3262 to report potential breaches

Procedures
